RECOMMENDED SYSTEM SETUP FOR VIRTUAL EVENTS

Presenting content in a virtual event is quickly becoming the norm in today's environment. With a few simple tips you can be confident in your delivery for a successful presentation.

1. Be Prepared

□ Speed Test - Click <u>HERE</u> to test your connection to the internet

- Upload speed should be at least 8 Mbps
- Download speed should be at least 16 Mbps
- For the most stable connection, plug an Ethernet cable into your computer from your internet router
- □ Ways to Increase Speed
 - Close unnecessary browser tabs and pause software updates running in the background
 - Disconnect all unnecessary devices from your Wi-Fi (i.e. smart TVs, Alexa/Google home, cellular devices, etc.)
 - Make sure to use a modern and up to date browser such as Google Chrome or Firefox when launching the speaker platform (not Internet Explorer)
- Video Camera Test Click <u>HERE</u> to test your video camera resolution

- Your camera should be at least 720p or 0.9 MP (megapixels)
- If your camera does not meet the suggested resolution, consider an attachable webcam OPTION 1 or OPTION 2
- Practice by recording yourself using your webcam
- Test out the tech platform to familiarize yourself with the features

2. Sound Check

□ To avoid an echo, make sure to join with your mic & speaker muted

- If your computer's internal audio is unclear, sometimes headphones or external microphones will work better. Consider purchasing a USB microphone such as Blue Yeti or Shure mv5 for the best sound
- Find a quiet spot to avoid background noise and turn off all notifications on your computer to avoid distracting yourself or your audience during a broadcast.
- □ Silence all devices

3. Lighting Check

- Make sure you are using front-facing light to ensure the audience can see you clearly and to reduce shadows
- Ensure good light on your face by facing a window to allow natural light to illuminate you. Avoid back-light (or lights from above) as it creates shadows. Where needed, supplement by putting a lamp or ring light behind your webcam
- □ Consider purchasing a lume cube or led ring light

4. Frame Yourself

- Center yourself leaving a small margin over the top of your head and having both shoulders in the frame
- □ Check your posture. Try standing up. If seated, lean forward to avoid slouching
- □ Elevate or suspend your webcam/camera so that it is at eye level or just above eye level
- Opt for solid color outfits and backgrounds as some cameras will act up with stripes and checkered patterns
- Darker color clothing is better

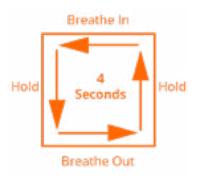

5. Your Background

- □ Use a background that aligns with the message you want to convey
- □ Make sure your background is not cluttered
- If you choose a virtual background, make sure it is not distracting
- □ Use neutral and subtle colors in the background to keep the focus on you.
- Having a plant, a piece of artwork or bookshelf in the back is a nice touch

6. Final Check

- Breathing exercise: take a deep breath in through your nose for 4 seconds, hold for 4 seconds, and release through your mouth for 4 seconds
- Maintain eye contact with the camera don't look at yourself
- □ Remember you are not talking to the camera, but rather through the camera
- □ Imagine the audience is on the other side
