

KidsData.org

Your Gateway to Data About Child and Family Health and Well-Being in California

Agenda

- Overview of KidsData
- Trends we're tracking
 - o Exclusive data on family experiences during the pandemic
- KidsData.org demonstration

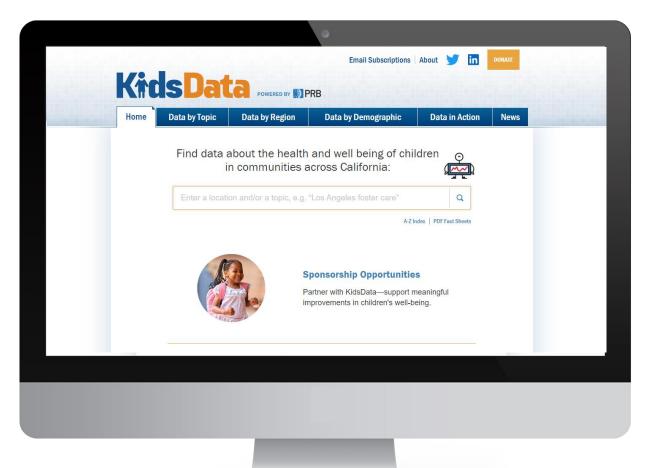

What is KidsData?

What is KidsData.org?

KidsData.org, a program of Population Reference Bureau (PRB), promotes the health and well-being of children in California by providing a free and easyto-use resource that offers high quality, wide ranging, **local** data to those who work on behalf of children.

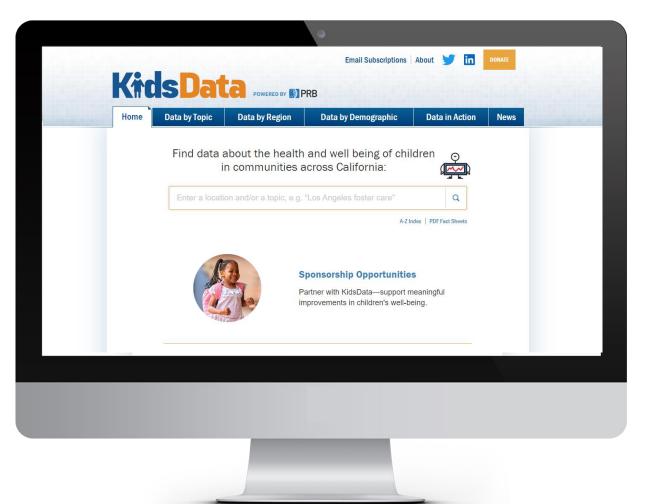

What is KidsData.org?

Easily find, customize, and use data on more than 1,000 measures of well-being.

- Geography: Counties, cities, school districts, legislative districts.
- Disaggregation: Age, gender, income, race/ethnicity, special health care needs status, sexual orientation, and more.

KidsData is more than just a website.

KidsData.org's 9 areas of child well-being.

What trends have caught our attention?

About 1 in 3 California children have at least one adverse childhood experience (ACE).

Source: PRB analysis of U.S. Dept. of Health and Human Services, National Survey of Children's Health, available KidsData.org.

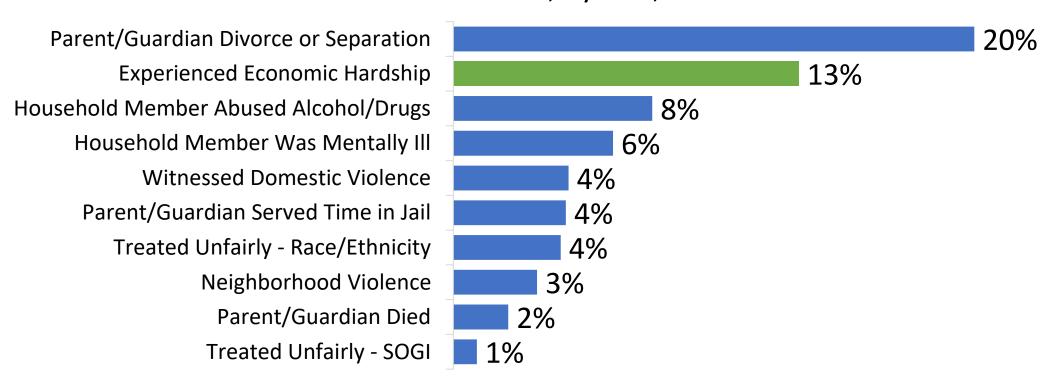

Economic hardship is one of the most common ACEs.

% of California Children, by ACE, 2017-2021

Source: PRB analysis of U.S. Dept. of Health and Human Services, National Survey of Children's Health, available KidsData.org.

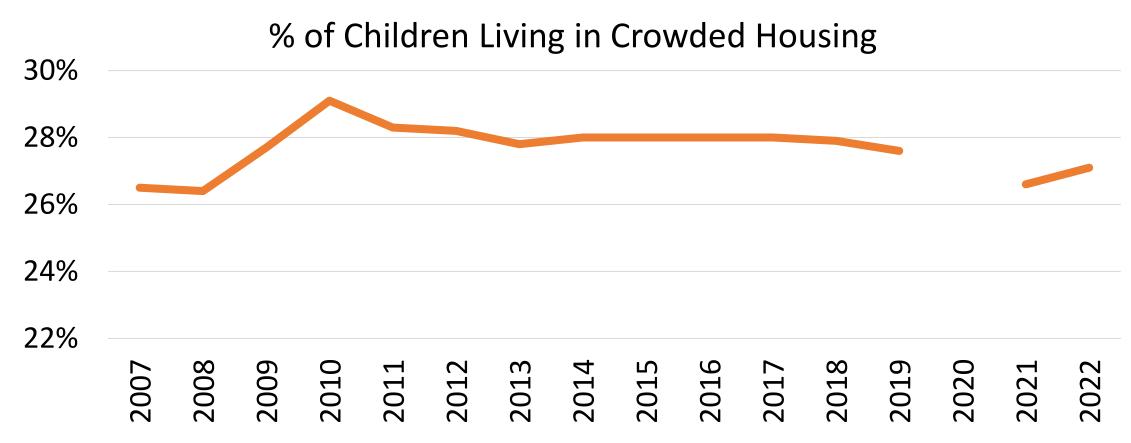

After falling for years, the share of children living in crowded housing rose in 2022.

Source: PRB analysis of U.S. Census Bureau American Community Survey public use microdata, available KidsData.org

Preschool enrollment declined steeply during the pandemic.

% of Children Ages 3-5 Enrolled in Pre-K or Kindergarten 80% 60% 40% 20% 0% 2009 2010 2011 2013 2015 2015 2016 2016

KidsData Exclusive: Family Experiences During the COVID-19 Pandemic

Collaborators

NATIONAL (WAVES 1-3)

- American Academy of Pediatrics
- CDC
- Prevent Child Abuse America
- Tufts Medical Center
- Lucile Packard Foundation for Children's Health

CALIFORNIA (WAVES 1-4)

- Lucile Packard Foundation for Children's Health
- CA Essentials for Childhood Initiative (CDPH, CDSS)
- CDPH, Office of Suicide Prevention
- KidsData

Unique data collection provided unique insights.

- Internet-based survey administered to households with children.
- Approximately 1,500 responses in each wave of the survey.
- Responses weighted to be representative of California population.

Other interesting findings from the survey...

During 1st year of the pandemic, 1 in 10 households:

- Started using food banks.
 - Rate of new food bank use was highest in Bay Area (14.0%).
 - Bay Area Counties: Alameda, Contra Costa, Marin, Monterey, Napa, San Francisco, San Mateo, Santa Clara, Santa Cruz, Solano, and Sonoma.
- Started using free or reduced price school meals.
 - Rate of new school meal use was highest along south coast (14.5%).
 - Southern Coastal Counties: Orange, San Diego, San Luis Obispo, Santa Barbara, and Ventura.

Research & Links

0 ACEs

Definition: Estimated percentage of children ages 0-17 with and without adverse childhood experiences (ACEs), by number (e.g., in 2017-2021, 4% of California children had experienced four or more ACEs).

Data Source: U.S. Dept. of Health and Human Services, National Survey of Children's Health (Apr. 2023).

Footnote: Due to changes in methodology, these estimates should not be compared with data from earlier years. This indicator reports on ten adverse childhood experiences: For children ages 0-17, (1) experienced economic hardship, (2) parent or guardian got divorced or separated, (3) parent or guardian died, (4) parent or guardian served time in jail, (5) witnessed domestic violence, (6) witnessed or experienced neighborhood violence, (7) household member was mentally ill, (8) household member abused alcohol or drugs, (9) treated unfairly because of race/ethnicity, and, for children ages 6-17, (10) treated unfairly because of sexual orientation or gender identity. ACE type (10) is captured in survey years 2020 and later only. These estimates are based on a survey of the population and are subject to both sampling and nonsampling error. For more information, see https://www.childhealthdata.org/learn-about-the-nsch/NSCH.

Why This Topic Is Important

Childhood adversity—such as poverty, maltreatment, experiences of racism, exposure to violence, and growing up with substance abuse or mental illness at home—can have negative, long-term impacts on health and well being (1, 3). More than one-third of children statewide and nationally have had at least one adverse childhood experience (ACE) (2). Early experiences affect brain structure and function, which provide the foundation for learning, emotional development, behavior, and health (3). The toxic stress associated with traumatic and often prolonged early adverse experiences can disrupt healthy development and lead to behavioral, emotional, academic, and health problems during childhood and adolescence (1, 3). It also can lead to serious behavioral, emotional, and health issues in adulthood, such as chronic diseases, obesity, substance abuse, and depression (1, 3). The more traumatic childhood events experienced, the more likely the impact will be substantial and lasting, especially if the child does not receive buffering supports (3).

Resilience—adapting well in the face of adversity, trauma, threats, or other significant sources of stress—involves a combination of internal and external factors (3). Internal factors go beyond biological predispositions and encompass adaptive responses—thoughts, actions, and habits that can be taught, learned, and developed by anyone—to interrupt the harmful effects of ACEs and toxic stress (3). Externally, having safe, stable, nurturing relationships and environments within and outside the family can reduce ACEs and strengthen resilience (1, 3).
